Custom Event & Engagement Tracking via GTM

Not every valuable action is a purchase. Email clicks, phone clicks, copied promo codes, CTA button clicks, contact form submissions, and scroll depth all matter — and here they're tracked on both browser and server, matched, and deduplicated just like e-commerce events.

Tracking What Happens Before the Sale

A lot of valuable user intent shows up before a purchase ever happens: someone clicks your email address, taps your phone number, copies a discount code, clicks a "Shop Now" button, submits a contact form, or scrolls deep into a page. These micro-conversions are strong engagement signals — and worth tracking with the same rigor as a purchase.

Each of these is captured with a custom GTM trigger tied to a specific user action (a `mailto:` link click, a copy event containing a promo pattern, a button's CSS class), fired on both the browser Meta Pixel and mirrored server-side through Conversions API and GA4 — deduplicated by Event ID just like the rest of the funnel.

WHAT'S COVERED

Events Tracked

Email Click
mailto: link clicks

Phone Click
tel: link clicks

Copy Text
Copied discount codes / emails

Shop Now Click
CTA button clicks

Contact Form Submit
Lead form submissions

Scroll Depth
25% / 50% / 100% scroll milestones

HOW IT WORKS

The Process

1

Custom Trigger

A GTM trigger built for the exact action — link pattern, CSS class, or copy content.

2

Mirror

The same event replayed server-side to CAPI and GA4 with a matching Event ID.

3

Consolidate

One server-side tag, regex-matched, handles every custom event in one place.

4

Verify

Every event checked for deduplication in GA4 Test Events before handoff.

email_click	Browser	Partner integration	178137398...	Today at 12:12:38 AM

Both phone_num_click and email_click events received from browser and server, matched by Event ID, and correctly marked "Deduplicated."

Copy Text Tracking

GTM TRIGGER

Copy Event, Filtered to Relevant Content

The copy_text tag fires only when the copied text contains ".com" — capturing meaningful copy actions like an email address or website URL, not every random text selection on the page.

GA4 TEST EVENTS

Copy Text — Verified Deduplication

The copy_text event received from both browser and server, matched and deduplicated — confirming this engagement signal is captured accurately.

Full Tag Coverage, Server-Side Validated

GTM PREVIEW

All Engagement Tags Firing Together

The screenshot shows the GTM Preview interface for container GTM-PX9F9337. On the left, a list of tags is visible, including 'The Common Young Wr...', 'Link Click', 'Click', 'copyText', 'Window Loaded', and 'DOM Ready'. The main panel displays the 'Output of GTM-PX9F9337' with tabs for Tags, Variables, Data Layer, Consent, and Console (2). The 'Tags' tab is active, showing a list of tags fired. A red box highlights the following tags and their firing counts:

Tag	Firing Count
Meta Pixel PageView	Meta Pixel - Fired 1 time
GA4 SS page_view	Google Tag - Fired 1 time
Meta Pixel email_click	Meta Pixel - Fired 1 time
SS FB email_click	Google Analytics: GA4 Event - Fired 1 time
Meta Pixel phone_num_click	Meta Pixel - Fired 1 time
SS FB phone_num_click	Google Analytics: GA4 Event - Fired 1 time
Meta Pixel copy_text	Meta Pixel - Fired 2 times
SS FB copy_text	Google Analytics: GA4 Event - Fired 2 times

Below the tags, the 'cHTML' tab is also visible.

PageView, email_click, phone_num_click, and copy_text all firing correctly across both Meta Pixel and server-side GA4 tags in a single session.

GTM SERVER CONTAINER

One Server Tag, Every Custom Event

The screenshot shows the GTM Tag Manager interface for a 'Meta Conversion API || Advance' tag. The 'Summary' tab is active, displaying the following configuration:

- Outgoing HTTP Requests from Server:** `https://graph.facebook.com/v25.0/2...` (POST - 200)
- Messages Where This Tag Fired:** 1 copy_text, 2 phone_num_click, 3 email_click
- Firing Triggers:** cEvent CAPI
- Filters:** Event Name matches RegEx `^(page_view|view_item|add_to_cart|begin_checkout|purchase|ad_d_payment_info|email_click|phone_num_click|copy_text)$`
- Blocking Triggers:** No blocking triggers

A single server-side Conversions API tag, regex-matched to catch every funnel and engagement event, successfully firing for copy_text, phone_num_click, and email_click in the same container.

CTA Trigger Precision & Full Event Coverage

GTM TRIGGER

Shop Now Click, Isolated by CSS Class

The screenshot shows the GTM Trigger configuration for 'shop_now_click'. The trigger is a Meta Pixel event that has succeeded. The configuration table is as follows:

Name	Value
Type	Meta Pixel
Firing status	Succeeded
Disable History Event Tracking	false
Facebook Pixel ID(s)	"Pixel ID"
Event ID	"Event ID"
Disable Automatic Configuration	false

Below the table, the 'Firing Triggers' section shows a list of triggers. The trigger 'shop now button click' is highlighted with a red box. The filters for this trigger are:

- Click Classes contains new_class
- _event equals gtm.click

A red arrow points to the 'new_class' filter value.

The shop_now_click tag filtered to only the button carrying a specific CSS class — so this signal always reflects the actual "Shop Now" CTA, not any other button on the page.

GTM SERVER CONTAINER

A Full Session, Every Event Type Covered

The screenshot shows the GTM Server Container tag configuration for 'Meta Conversion API || Advance'. The tag is configured to fire on outgoing HTTP requests from the browser. The configuration table is as follows:

Name	Value
Type	Meta Conversion API
Firing status	Succeeded
Disable History Event Tracking	false
Facebook Pixel ID(s)	"Pixel ID"
Event ID	"Event ID"
Disable Automatic Configuration	false

Below the table, the 'Firing Triggers' section shows a list of triggers. The trigger 'shop now button click' is highlighted with a red box. The filters for this trigger are:

- Click Classes contains new_class
- _event equals gtm.click

A red arrow points to the 'new_class' filter value.

The 'Messages Where This Tag Fired' section shows a list of messages where the tag fired. The messages are:

- 1 page_view
- 3 page_view
- 5 page_view
- 7 page_view
- 8 scroll_10
- 9 scroll_25
- 10 scroll_50
- 12 page_view
- 13 scroll_10
- 14 scroll_25
- 15 shop_now_click
- 16 scroll_50
- 18 page_view
- 19 scroll_10
- 20 scroll_25
- 21 shop_now_click
- 22 scroll_50
- 24 page_view
- 25 scroll_50
- 26 scroll_10
- 27 scroll_25
- 28 phone_num_click
- 29 email_click
- 30 copy_text
- 32 page_view
- 33 scroll_10
- 34 scroll_25
- 35 scroll_50
- 36 contact_form_submit

The server-side tag's fire log across a real session — scroll depth milestones, page views, shop_now_click, phone_num_click, email_click, copy_text, and contact_form_submit all captured by the same consolidated tag.

Everything Firing, In One Session

GTM PREVIEW

Complete Engagement Coverage — Browser & Server

A single page visit triggering PageView, email_click, phone_num_click, copy_text, contact_form_submit, shop_now_click, and scroll — each with a matching Meta Pixel tag on the browser and a server-side GA4 tag, all firing without errors.

LET'S WORK TOGETHER

Want to see what's happening before the sale?

Email clicks, phone taps, copied codes, CTA clicks, form fills, scroll depth — I'll get every meaningful engagement signal tracked accurately, deduplicated, and ready for you to act on.
