TikTok Pixel & Events API Tracking

A full browser-and-server TikTok tracking setup — Pixel on the browser, Events API on the server, hashed Advanced Matching data, and event IDs that line up exactly for clean deduplication.

TikTok Pixel

Events API (Server-Side)

Automatic Advanced Matching

Hashed Customer Data

Event ID Matching

Browser + Server TikTok Tracking

TikTok Ads works the same way Meta does: browser-side Pixel events on their own are fragile — ad blockers, cookie restrictions, and browser privacy settings all cause data loss. The fix is the same too — a server-side Events API connection that mirrors every Pixel event, matched by a shared event_id so TikTok can deduplicate correctly instead of double-counting.

This setup also enables **Automatic Advanced Matching**, so hashed customer data (email, phone, name, address) is sent alongside each event to improve match rate and ad performance — all verified end to end using TikTok's Pixel Helper extension and Events Manager.

WHAT'S COVERED

Key Components

TikTok Pixel
Browser-side base code

Events API
Server-side event mirroring

Advanced Matching
Hashed email & phone

Event ID Matching
Browser & server deduplication

Pixel Helper
Live browser-side verification

Events Manager
Server-side event verification

HOW IT WORKS

The Process

1

Install

Pixel base code added to the site, Automatic Advanced Matching enabled.

2

Mirror

Every browser event replayed server-side via Events API with the same event ID.

3

Hash

Customer email and phone hashed before being sent for Advanced Matching.

4

Verify

Pixel Helper and Events Manager checked to confirm matching, deduplicated events.

Base Pixel Code Installed

Automatic Advanced Matching Enabled

Browser-Side Verification

TIKTOK PIXEL HELPER

Live Events Detected on the Site

TikTok's Pixel Helper extension confirming the Pixel is firing correctly — LandingPageView, Pageview, and EngagedSession events all detected in real time.

TIKTOK EVENTS MANAGER

Full Funnel, Browser-Side, with Hashed Data

View Content through Purchase, all received from the browser, with the Purchase event showing correct order value, currency, and hashed email and phone number for Advanced Matching.

Server-Side Verification

TIKTOK PIXEL HELPER

Purchase Confirmed on the Thank-You Page

The screenshot shows a web browser with the URL `dev-marjanas-website.pantheonsite.io/step/thank-you/?wcf-key=wc_order_3a8rR8wBnJqZV8wcf-order=`. The page displays a 'Thank you, sadia!' message and order details for Order #4627. A 'TikTok Pixel Helper' extension is active, showing a 'Purchase' event with the following details:

- Event ID: 1784568799660.462538.74
- Order ID: 4627
- Value: 320
- Currency: BDT
- Event Trigger Source: GoogleTagManagerClient
- GTM Version: 0.2.02:13
- Page URL: [Show](#)
- Load Time: 347 ms
- Timestamp: 2026-07-20 23:33:20
- Setup Method: Custom Code
- Parameter Details: [Show](#)
- Hashed Email: [Show](#)
- Hashed Phone: [Show](#)

Pixel Helper on the order confirmation page showing the Purchase event with its order ID, value, event ID, and hashed customer data — ready to be matched against the server-side event.

TIKTOK EVENTS MANAGER

The Same Purchase, Received from the Server

The screenshot shows the TikTok Events Manager interface. The 'Purchase' event is selected, and its details are displayed on the right. The details include the event ID, order ID, value, currency, and hashed customer data.

Event Details:

- Event ID: 1784568799660.462538.74
- Order ID: 4627
- Value: 320
- Currency: BDT
- Event Trigger Source: GoogleTagManagerClient
- GTM Version: 0.2.02:13
- Page URL: [Show](#)
- Load Time: 347 ms
- Timestamp: 2026-07-20 23:33:20
- Setup Method: Custom Code
- Parameter Details: [Show](#)
- Hashed Email: [Show](#)
- Hashed Phone: [Show](#)

Customer Information parameters:

- hashed_email: f5931993c74f3baa3b5930b86cd2fa4dea75d7a30ceaacbd2835db8668f
- hashed_phone_number: 161b6dacf21d292575a02b82b1fbed2fd453398ef6e0a78077d2a02499a427
- ip: 103.140.213.128
- user_agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/150.0.0.0 Safari/537.36

The server-side Events API call for the same order — same value, currency, and hashed customer data — sent via Events Manager's server connection method rather than the browser.

Exact Event ID Matching

TIKTOK PIXEL HELPER

Event ID on the Browser Side

The screenshot shows a browser window with a thank-you page from 'dev-marjanas-website.pantheonsite.io'. The page displays 'Order #4628' and 'Thank you, sadia!'. A sidebar on the right shows order details like contact, address, and payment. Overlaid on the right is the 'TikTok Pixel Helper' extension interface. It shows the event ID 'D9EUL93C77U03DOJGIUG' and a list of events: 'Pageview' and 'Purchase'. The 'Purchase' event details are expanded, showing 'event_id: 1784570144123.893237.74' highlighted with a red box and a red arrow. Other details include 'Page URL', 'Load Time', 'Timestamp', 'Setup Method', 'Parameter Details', and 'Metadata Automatically Detected'.

The Purchase event ID generated on the browser, ready to be sent alongside the matching server-side event for deduplication.

TIKTOK EVENTS MANAGER

The Identical Event ID on the Server

The screenshot shows the 'TikTok Events Manager' interface. On the left is a sidebar with 'Events Manager', 'Home', 'Data sources', 'Partners', and 'Connect data source'. The main area is titled 'Test event activity' and shows a list of events. The 'Purchase' event is selected, and its details are shown on the right. The 'Parameters' section is expanded, showing 'event_id: 1784570144123.893237.74' highlighted with a red box and a red arrow. Other details include 'Connection method', 'URL', 'Setup method', 'Parameters', 'Customer information parameters', and 'hashed_email'.

The exact same event ID received server-side — proving the browser and server events are properly linked, so TikTok counts this Purchase once, not twice.

LET'S WORK TOGETHER

Need TikTok tracking that holds up?

From Pixel installation to a full server-side Events API setup with Advanced Matching, I'll build TikTok tracking that's accurate, deduplicated, and verified — not just installed and left untested.
